

# ACCŪSTAT®

## Low Voltage & Line Voltage Thermostats and Limiters

The ACCŪSTAT family of controls offers precise temperature control using PSG's ACCŪTHERM® snap-in preset and adjustable sensors (sold separately). There are several ACCŪSTAT series, including:

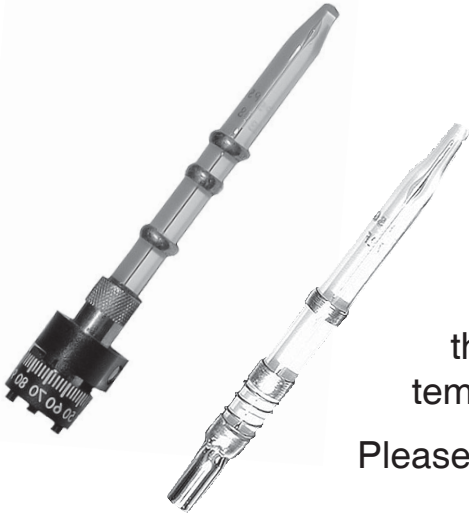

- Low voltage thermostats for single stage, multi stage, and heat pump applications, housed in tamper-resistant locking cases, with setback capability on selected models.
- Line voltage thermostats for single stage heat only and heat/cool applications, housed in tamper-resistant locking cases.
- Energy Guard thermostats with adjustable temperature setting for single stage heat only and heat/cool applications and the option to use snap-in sensors for temperature limiting.
- Limiters for use in conjunction with an existing thermostat, available in duct mount or wall mount models.

These controls are ideal for commercial applications such as warehouses and fast food restaurants or residential applications such as condominiums and other managed properties.

Please see individual specification sheets for detailed technical information.

# ACCŪTHERM®

## Preset & Adjustable Sensors

PSG's patented ACCŪTHERM® sensors work in all of the ACCŪSTAT® controls, including low voltage, line voltage, heat pump, Energy Guard, and limiters.

These mercury-based sensors provide high accuracy with virtually no temperature drift.

Both preset and adjustable models are available. The preset models offer tamper-proof temperature control, and the adjustable model offers the flexibility of choosing any temperature between 40° and 90°F.

Please see specification sheet for detailed technical information.
