

Radiant Digital Programmable Line Voltage Thermostats

The Radiant programmable controls are simple to use and have a large easy-to-read display. They feature 5-1-1 programming, which allows for up to four events per day (Wake, Leave, Return, Sleep) and separate programming for the weekend. A non-volatile memory chip protects the programming in the event of a power loss.

They are available in 120 VAC or 240 VAC, and the 240 VAC models are available in either single or double pole. In addition, customized cool-only models are available upon request.

These controls are ideal for residential and property management applications utilizing baseboard electric heat, radiant heat zone valves, and infrared heaters.

Please see specification sheet for detailed technical information.

Model #	Description
RPLV-120S	120 VAC Single Pole
RPLV-240S	240 VAC Single Pole
RPLV-240D	240 VAC Double Pole

No Accessories Available
